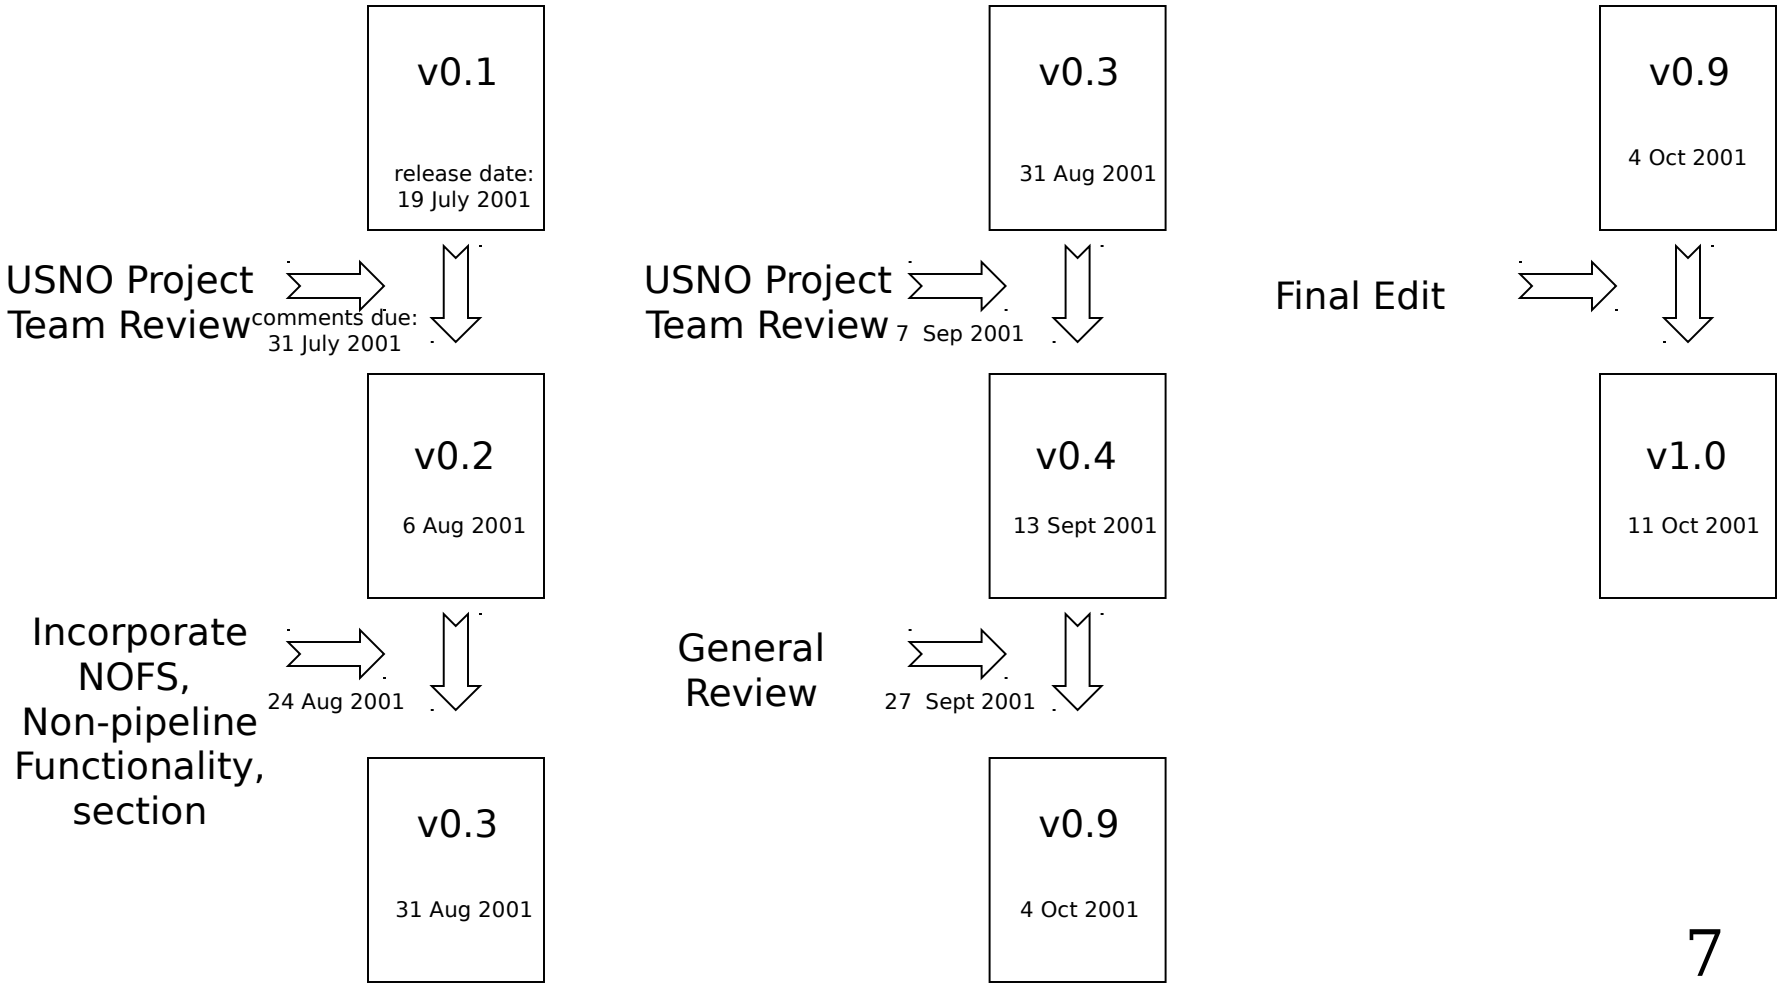
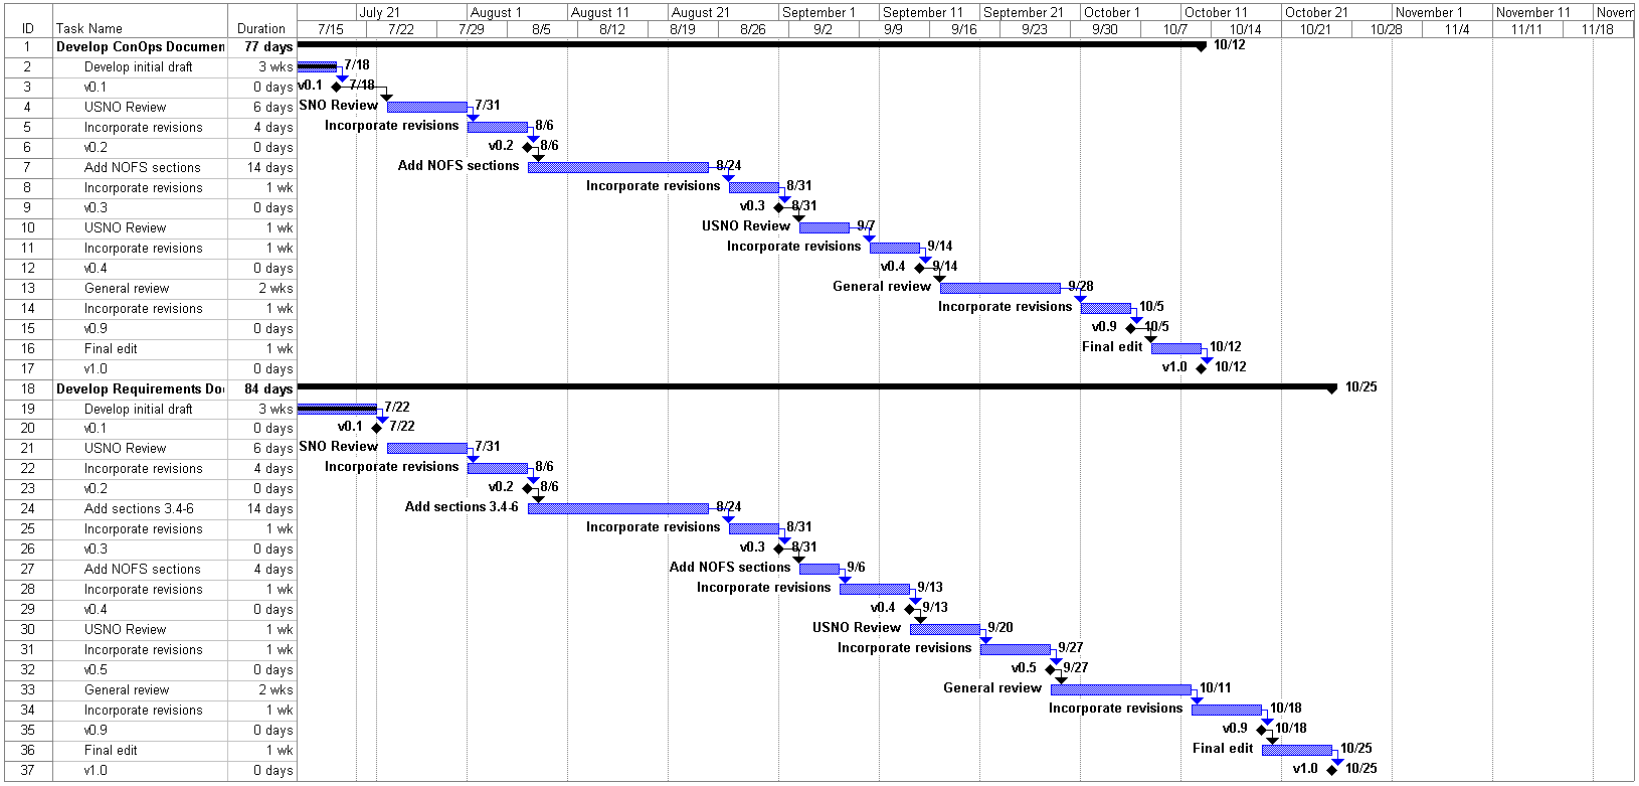
Operations Concept Document Evolution



United States Naval Observatory

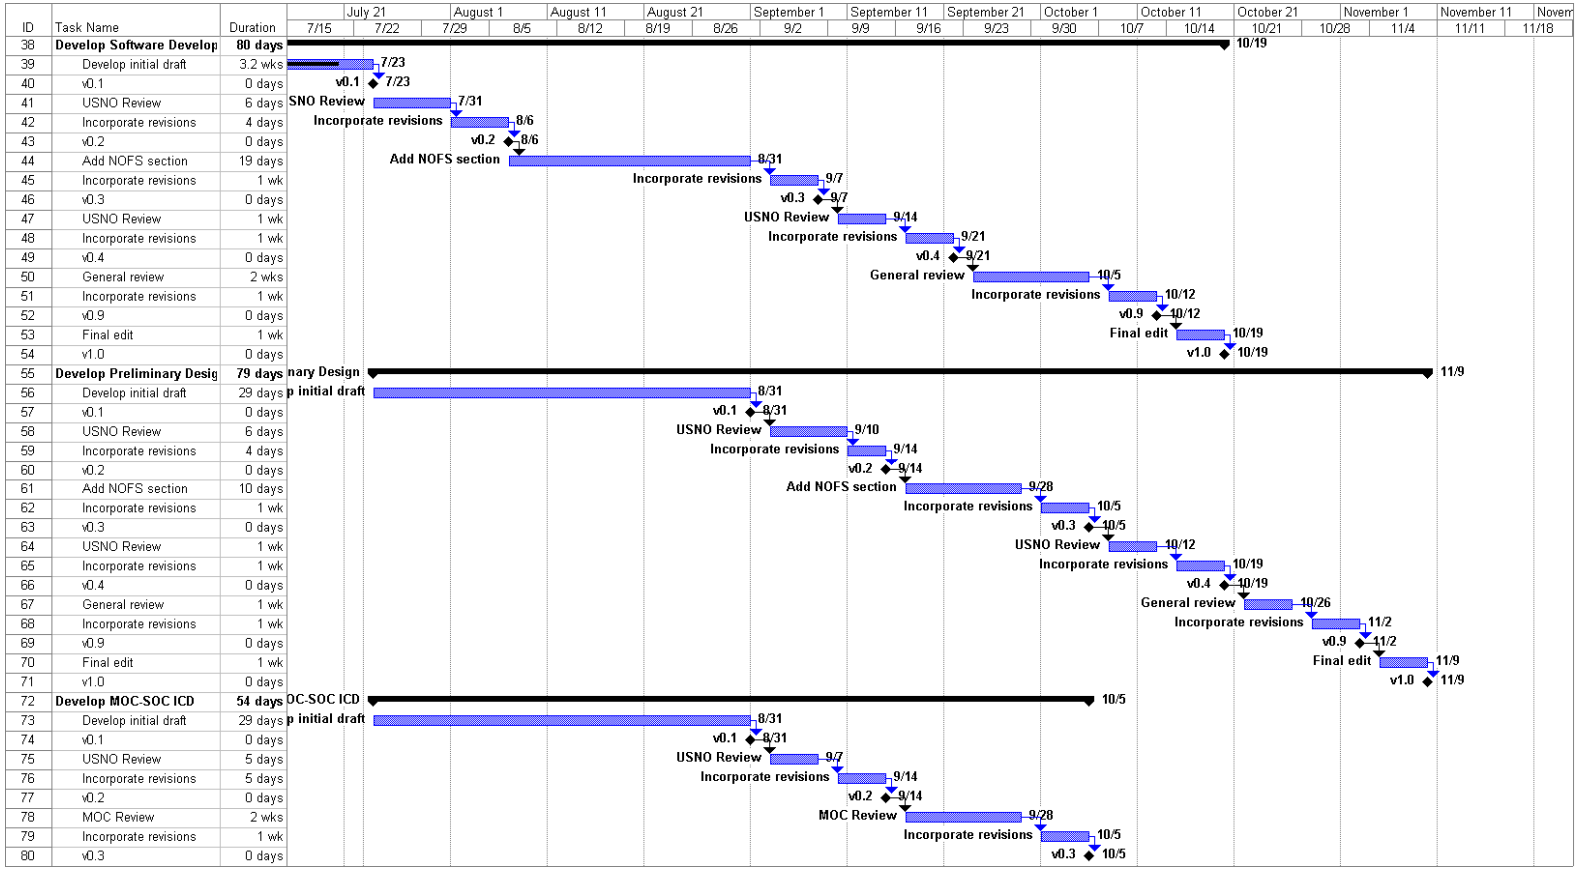
PDR Document Schedule



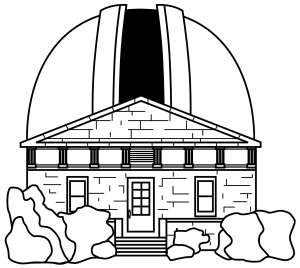
ID	Task Name	Duration
1	**Develop ConOps Documen**	**77 days**
2	Develop initial draft	3 wks
3	v0.1	0 days
4	USNO Review	6 days
5	Incorporate revisions	4 days
6	v0.2	0 days
7	Add NOFS sections	14 days
8	Incorporate revisions	1 wk
9	v0.3	0 days
10	USNO Review	1 wk
11	Incorporate revisions	1 wk
12	v0.4	0 days
13	General review	2 wks
14	Incorporate revisions	1 wk
15	v0.9	0 days
16	Final edit	1 wk
17	v1.0	0 days
18	**Develop Requirements Do**	**84 days**
19	Develop initial draft	3 wks
20	v0.1	0 days
21	USNO Review	6 days
22	Incorporate revisions	4 days
23	v0.2	0 days
24	Add sections 3.4-6	14 days
25	Incorporate revisions	1 wk
26	v0.3	0 days
27	Add NOFS sections	4 days
28	Incorporate revisions	1 wk
29	v0.4	0 days
30	USNO Review	1 wk
31	Incorporate revisions	1 wk
32	v0.5	0 days
33	General review	2 wks
34	Incorporate revisions	1 wk
35	v0.9	0 days
36	Final edit	1 wk
37	v1.0	0 days

United States Naval Observatory

PDR Document Schedule (contd)



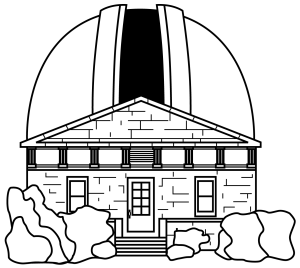
ID	Task Name	Duration
38	**Develop Software Develop**	**80 days**
39	Develop initial draft	3.2 wks
40	v0.1	0 days
41	USNO Review	6 days
42	Incorporate revisions	4 days
43	v0.2	0 days
44	Add NOFS section	19 days
45	Incorporate revisions	1 wk
46	v0.3	0 days
47	USNO Review	1 wk
48	Incorporate revisions	1 wk
49	v0.4	0 days
50	General review	2 wks
51	Incorporate revisions	1 wk
52	v0.9	0 days
53	Final edit	1 wk
54	v1.0	0 days
55	**Develop Preliminary Desig**	**79 days**
56	Develop initial draft	29 days
57	v0.1	0 days
58	USNO Review	6 days
59	Incorporate revisions	4 days
60	v0.2	0 days
61	Add NOFS section	10 days
62	Incorporate revisions	1 wk
63	v0.3	0 days
64	USNO Review	1 wk
65	Incorporate revisions	1 wk
66	v0.4	0 days
67	General review	1 wk
68	Incorporate revisions	1 wk
69	v0.9	0 days
70	Final edit	1 wk
71	v1.0	0 days
72	**Develop MOC-SOC ICD**	**54 days**
73	Develop initial draft	29 days
74	v0.1	0 days
75	USNO Review	5 days
76	Incorporate revisions	5 days
77	v0.2	0 days
78	MOC Review	2 wks
79	Incorporate revisions	1 wk
80	v0.3	0 days



SOC Concept of Operations

MO & DA Quarterly Review

7/23/01



Concept of Operations Status

- Based on:
  - MRD, SRD, Calibration Plan (draft)
  - Interviews with MO & DA personnel
- Purpose
  - Produce a conceptual description of a system that meets program level requirements
  - Serve as a basis for deriving system-level functional and performance requirements
- Draft version 0.1 released 19 July 2001
  - Intended for internal (USNO) review only
  - Does not include:
    - Simulator
    - Non-pipeline operations
  - Closure date for comments: 31 July 2001

Concept of Operations Status (contd)

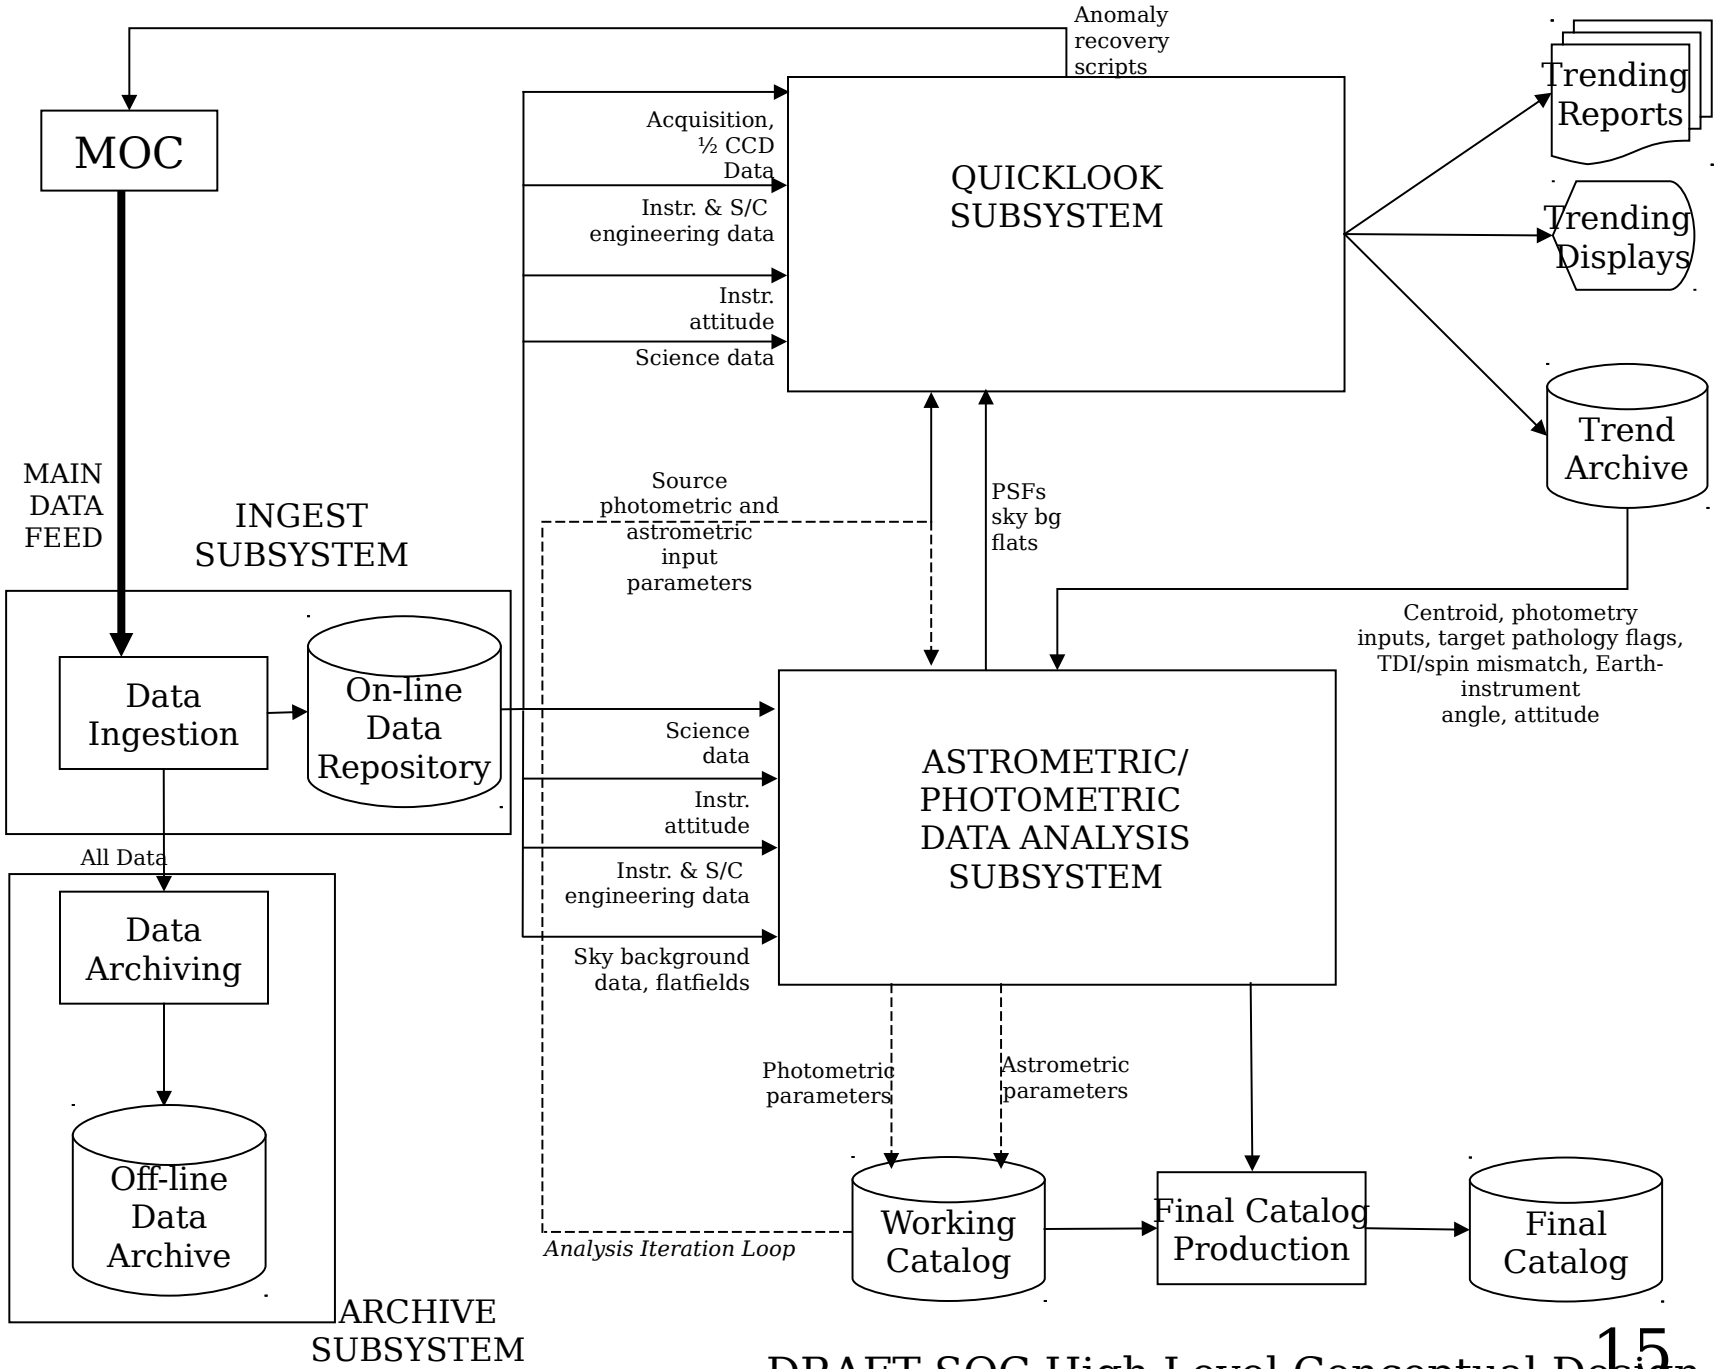
- Version 0.3 will include Simulator, non-pipeline operations
  - Closure date: 24 August 2001
- Version 1.0 target release date 11 October 2001

Concept of Operations

- SOC Data Processing System is divided into four subsystems:
  - Data ingestion
  - Data archiving
  - Quicklook
  - Astrometric and Photometric Data Analysis

Data Ingestion, Data Archiving Subsystems

- Data Ingestion
  - Monitors staging area
  - Makes ingested data accessible to other three subsystems
- Data Archiving
  - All data received from MOC is copied to permanent storage medium (DVD)
  - Entry made into archiving database
  - Intended for problem recovery



Anomaly recovery scripts
MOC
Acquisition, ½ CCD Data
Instr. & S/C engineering data
Instr. attitude
Science data
QUICKLOOK SUBSYSTEM
Trending Reports
Trending Displays
Trend Archive
MAIN DATA FEED
INGEST SUBSYSTEM
Source photometric and astrometric input parameters
PSFs sky bg flats
Centroid, photometry inputs, target pathology flags, TDI/spin mismatch, Earth-instrument angle, attitude
Data Ingestion
On-line Data Repository
Science data
Instr. attitude
Instr. & S/C engineering data
Sky background data, flatfields
ASTROMETRIC/ PHOTOMETRIC DATA ANALYSIS SUBSYSTEM
All Data
Data Archiving
Off-line Data Archive
Photometric parameters
Astrometric parameters
Working Catalog
Final Catalog Production
Final Catalog
Analysis Iteration Loop
ARCHIVE SUBSYSTEM

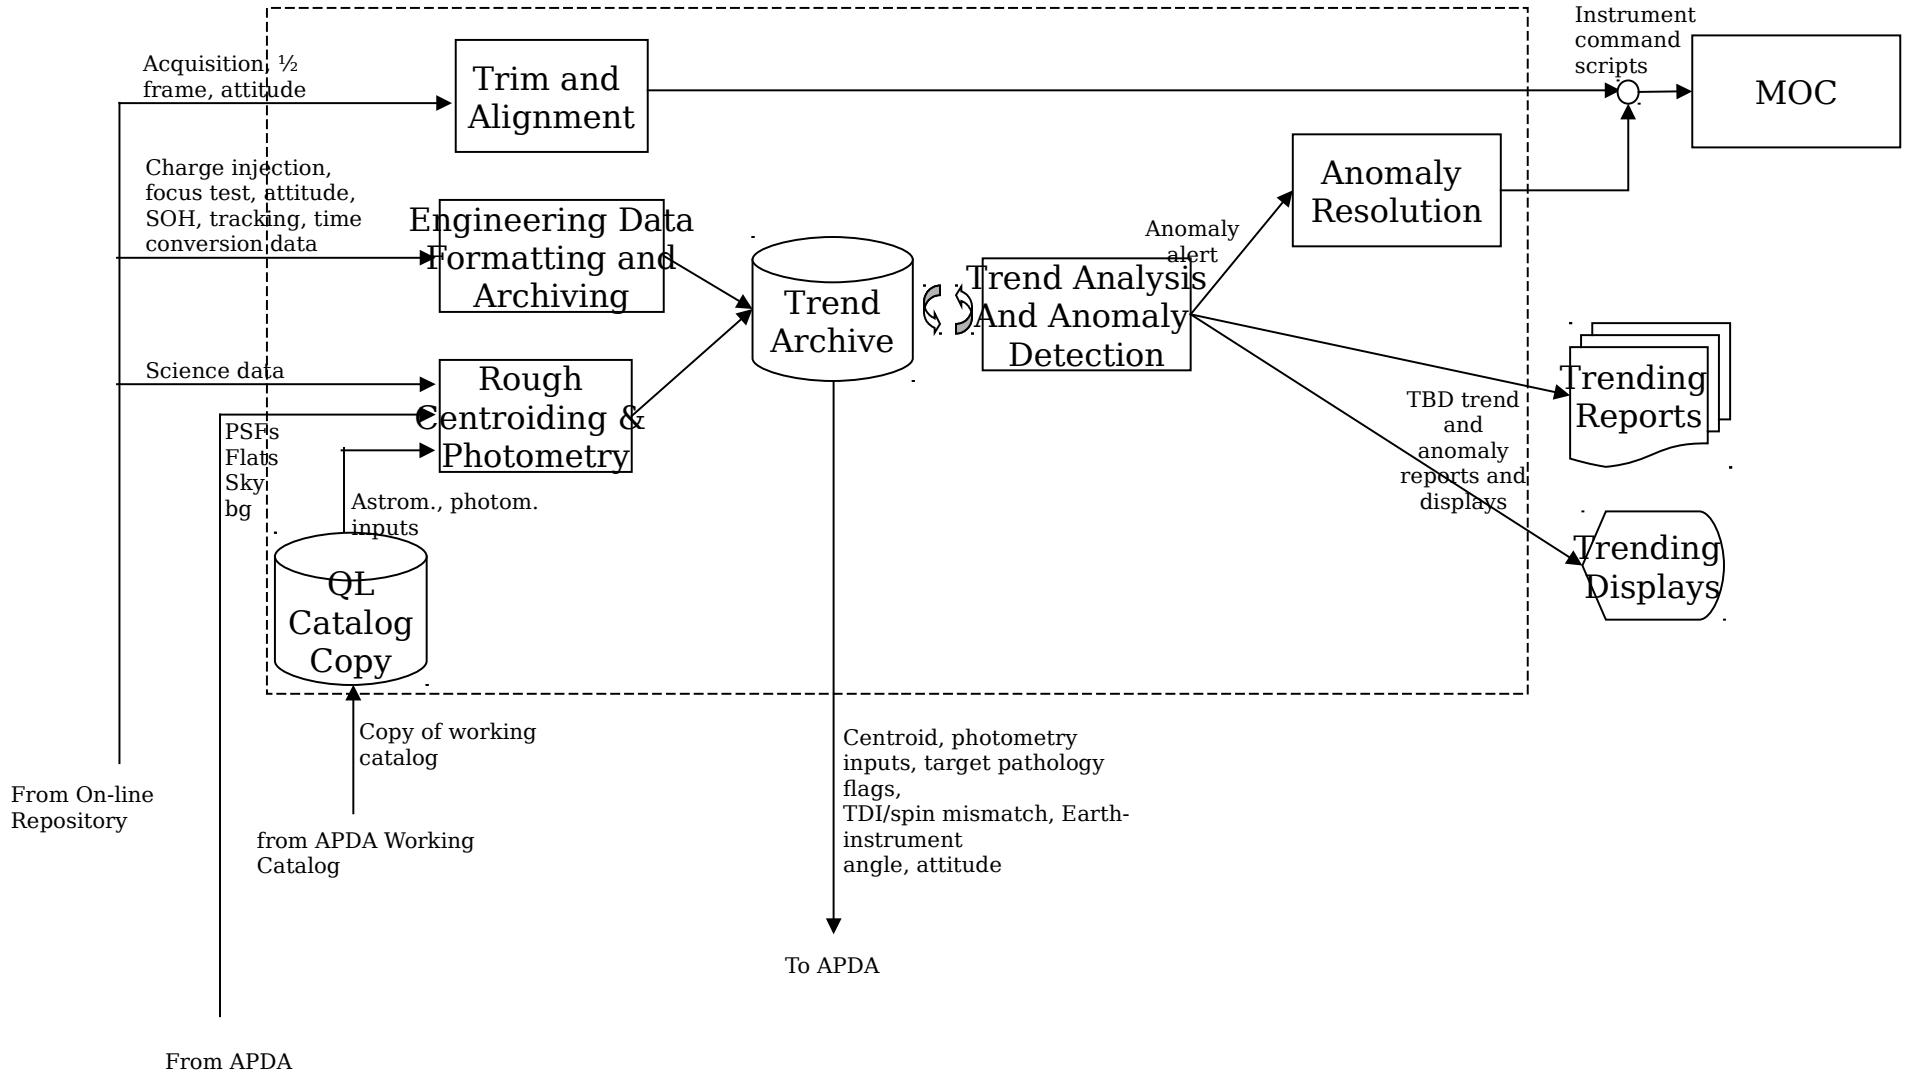
United States Naval Observatory

Quicklook

Full-sky Astrometric Mapping Explorer
U.S. Naval Observatory

- Purpose:
  - Instrument/spacecraft anomaly detection
  - Trend history
  - Support trim/alignment procedure
  - Generate centroiding starting points

QUICKLOOK SUBSYSTEM



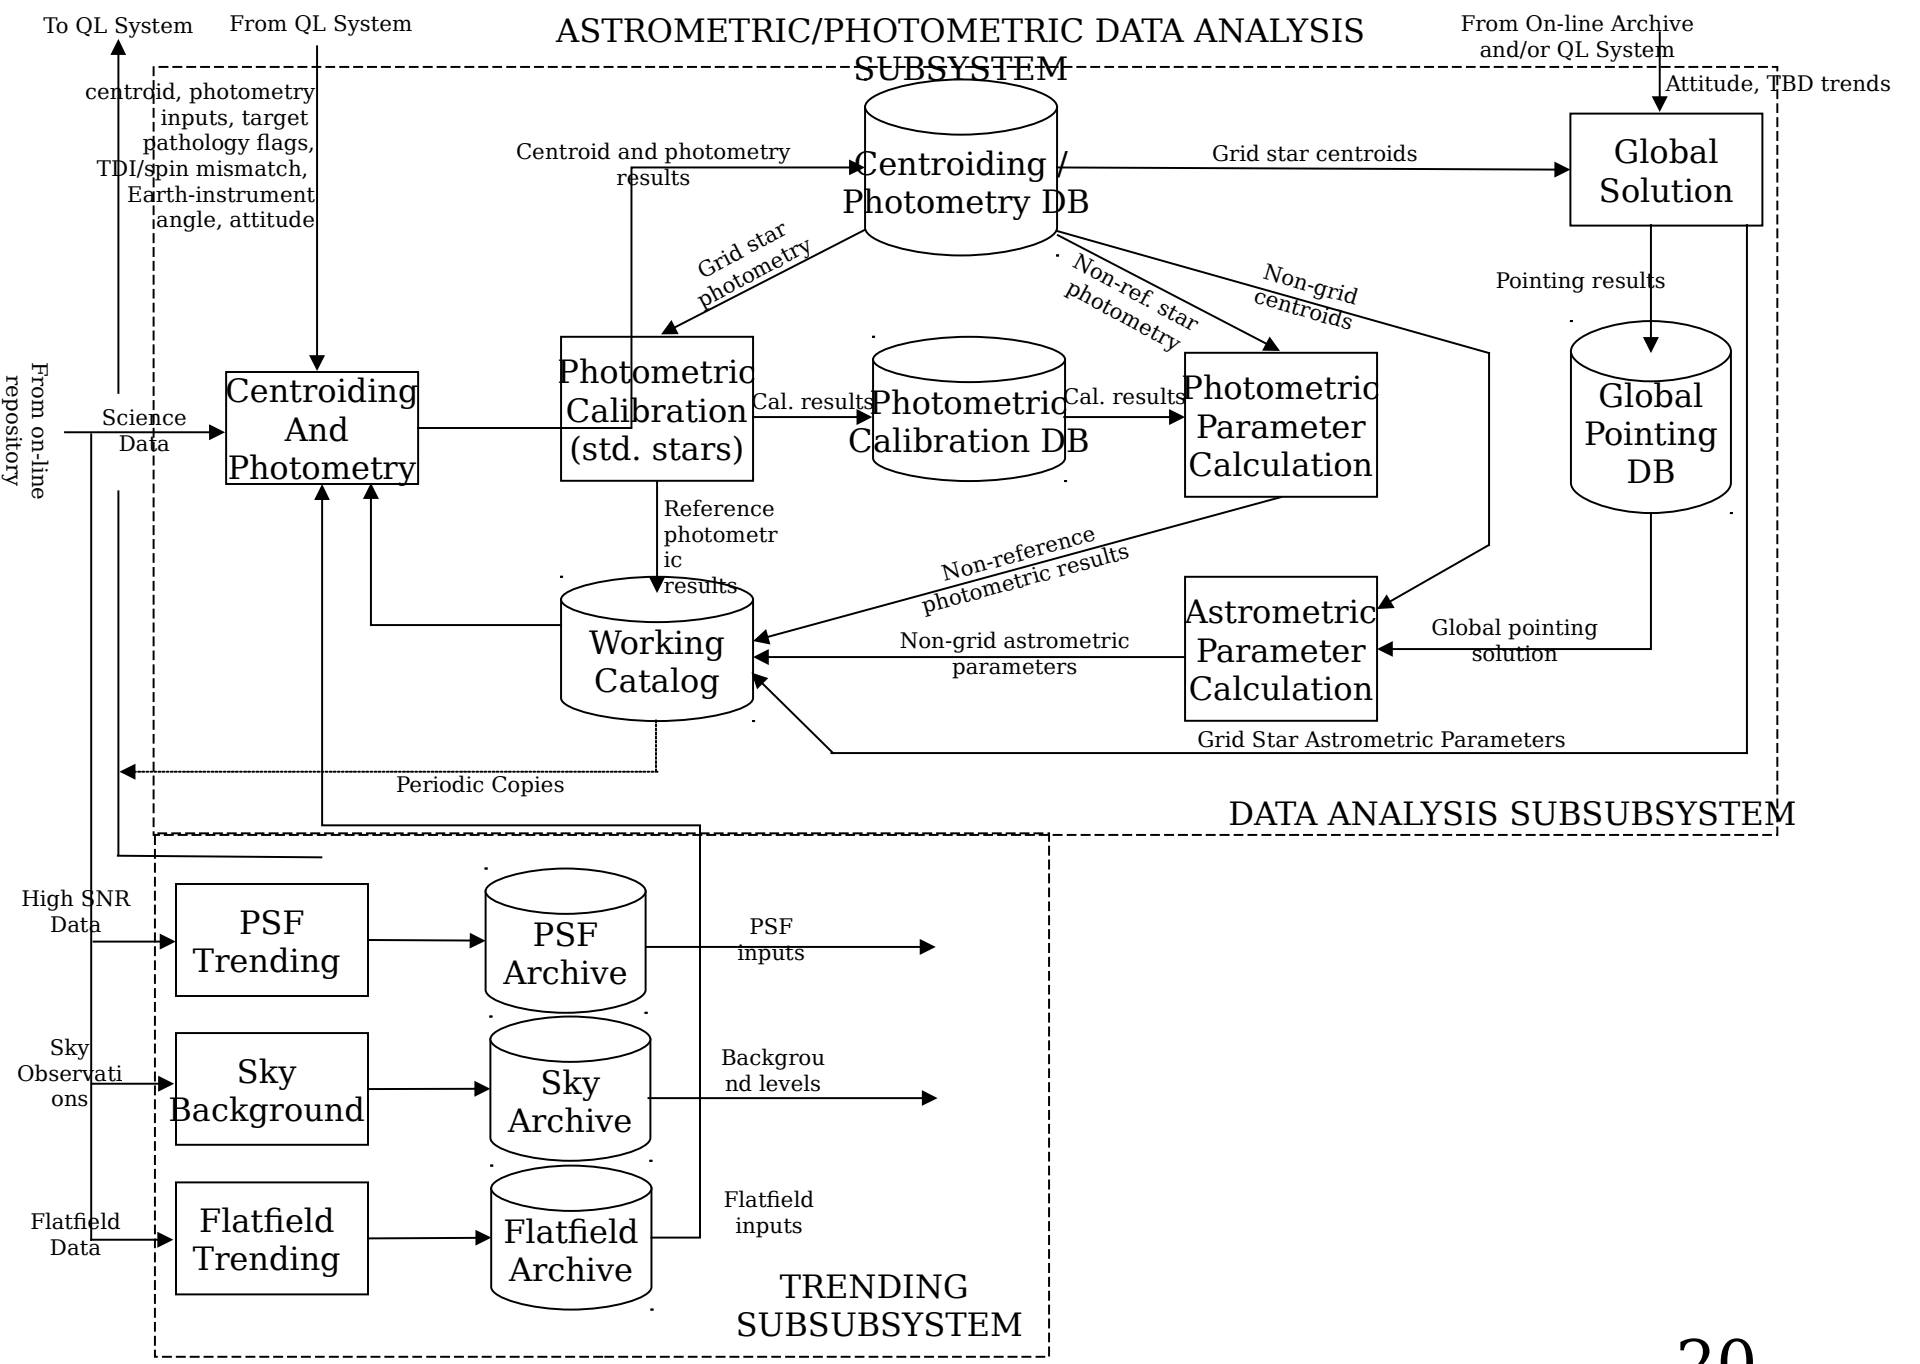
QL Questions, Issues

- What are the centroiding outputs?
- How are potential source pathologies identified?
  - Astrometric
  - Photometric
- What are the parameters that will be monitored?
- What are the anomaly condition indicators?
  - Out of bounds
  - Singularities
- Anomaly recovery procedures are TBD
- Trending, anomaly reports and displays are TBD

United States Naval Observatory

APDA

- Pupose
  - Science data reduction
  - Analysis-intensive trending
    - PSF
    - Sky background
    - Flat fielding

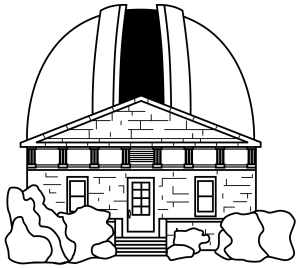


ASTROMETRIC/PHOTOMETRIC DATA ANALYSIS SUBSYSTEM
To QL System
From QL System
From On-line Archive and/or QL System
Attitude, TBD trends
centroid, photometry inputs, target pathology flags, TDI/spin mismatch, Earth-instrument angle, attitude
Centroid and photometry results
Centroiding Photometry DB
Grid star centroids
Global Solution
Grid star photometry
Non-ref. star photometry
Non-grid centroids
Pointing results
From on-line repository
Science Data
Centroiding And Photometry
Photometric Calibration (std. stars)
Cal. results
Photometric Calibration DB
Cal. results
Photometric Parameter Calculation
Global Pointing DB
Reference photometric results
Non-reference photometric results
Working Catalog
Non-grid astrometric parameters
Astrometric Parameter Calculation
Global pointing solution
Grid Star Astrometric Parameters
Periodic Copies
DATA ANALYSIS SUBSUBSYSTEM
High SNR Data
PSF Trending
PSF Archive
PSF inputs
Sky Observations
Sky Background
Sky Archive
Background levels
Flatfield Data
Flatfield Trending
Flatfield Archive
Flatfield inputs
TRENDING SUBSUBSYSTEM

United States Naval Observatory

APDA Questions, Issues

- Trending subsystem: does it belong in QL or APDA?
- Trending Issues: How are we going to do these?
  - PSF-Archive-Centroiding
  - Sky background-Archives-Centroiding
  - Flatfielding-Archive-Centroiding
- Centroiding needs to be worked out
  - Inputs, outputs
  - Feasibility
- Global Solution
  - There is a lot of stuff inside the GS process—basic feasibility of solution needs to be shown
- Photometric calibration
- Prototyping has concentrated on the Global Solution process
  - May want to direct some prototyping effort to other technical risk areas



Requirements Status

MO & DA Review

7/23/01

United States Naval Observatory

SOC Requirements Status

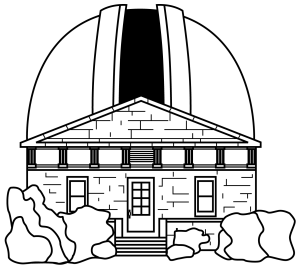
- Based directly on SOC Concept of Operations v0.1
  - Projection of ConOps into “functional requirements space”
  - More important at this point in time to review ConOps document closely
- Purpose:
  - To produce a baseline set of functional requirements
    - System design proceeds from this baseline set
  - To provide a mechanism for traceability between source (high level) requirements and design elements
    - Ensures that all high-level requirements are being met by the design
  - To provide the set of test cases against which the implemented system can be tested
  - To set priorities for design and development
- Draft version 0.1 released 22 July 2001
  - Intended for internal (USNO) review only
  - Does not include:
    - Simulator
    - Non-pipeline operations
  - Closure date for comments: 31 July 2001

United States Naval Observatory

SOC Requirements Status (contd)

Full-sky Astrometric Mapping Explorer
U.S. Naval Observatory

- Version 0.3 will include Simulator, non-pipeline operations
  - Closure date: 6 Sept 2001
- Version 1.0 target release date 25 October 2001



MOC-SOC ICD Status

MO & DA Quarterly Review

United States Naval Observatory

MOC-SOC ICD Status

Full-sky Astrometric Mapping Explorer
U.S. Naval Observatory

- Purpose
  - Explicitly define the interface between the MOC and SOC
    - File types, formats, sizes, frequency, connection interruption recovery procedures, *etc.*
  - Can effectively be used to define Simulator-Pipeline interface
- Initial draft target date: 31 August 2001
- Version 1: CDR

United States Naval Observatory

MOC-SOC ICD: Issues

Full-sky Astrometric Mapping Explorer
U.S. Naval Observatory

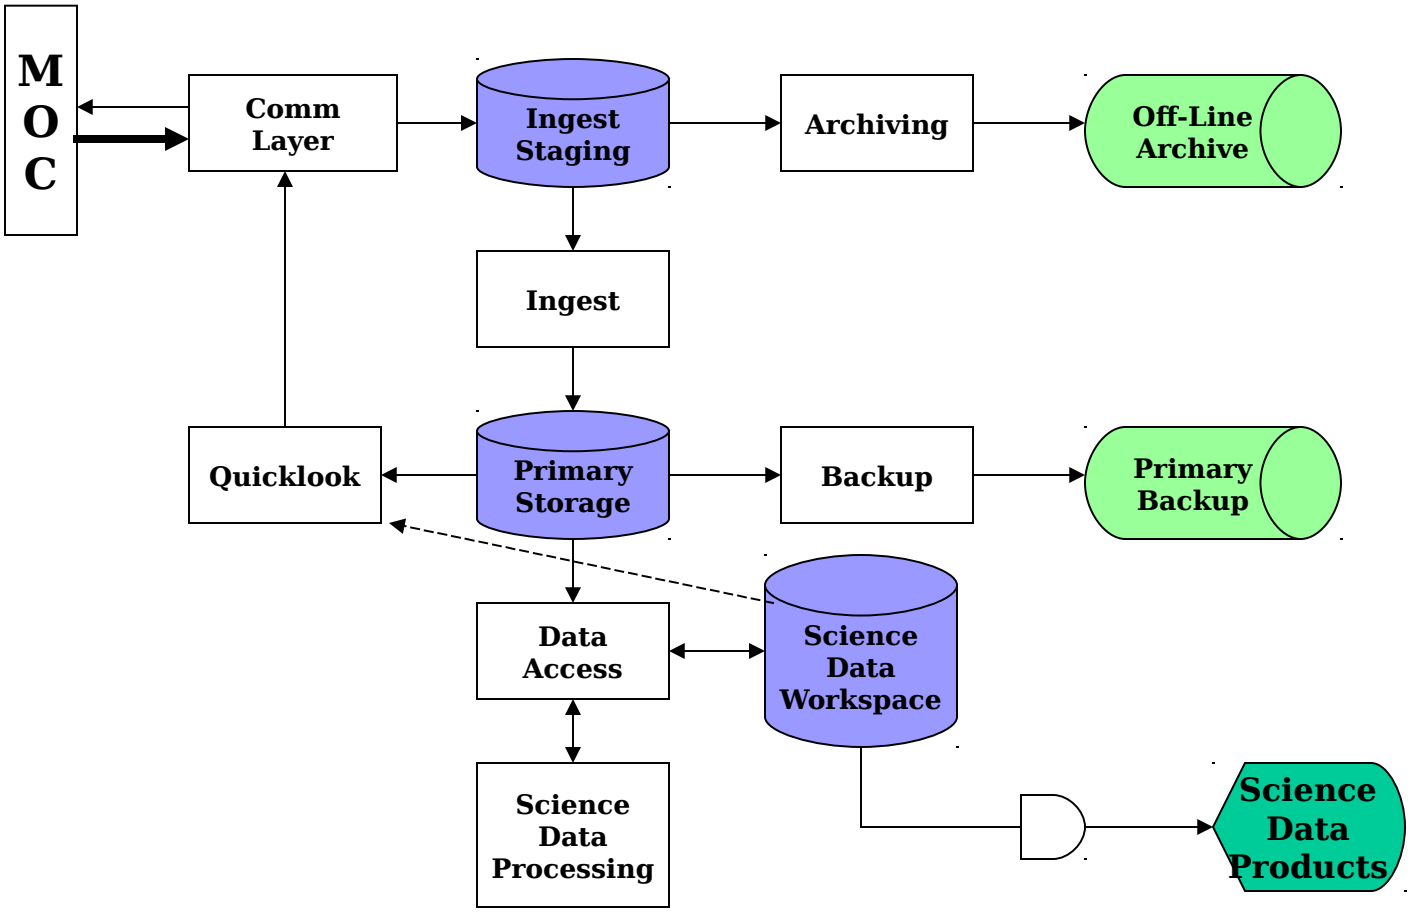
- MOC “push” vs. SOC “pull”
  - Initial inclination: MOC push
- Telemetry stream vs. discrete file delivery
  - Initial inclination: discrete file delivery
  - Initial list of file types:
    - Science Data files (10 second segment)
    - Full Frame file (individual CCD half)
    - Acquisition file (individual 600x600 window)
    - Charge Injection Test file (individual test profile)
    - Catalog Dump file (individual catalog dump)
    - Focus Test file (individual focus test)
    - Instrument Attitude file (10 second segment)
    - SOH file (10 second segment)
    - Ground Station Tracking file (10 second segment)
    - Time Conversion file (valid over 10 minute span)

Software Development Plan

- Outlines the Process for Producing Quality Software
  - System Overview
  - General Policies
  - Specific Development Plan
  - Risk Management
  - Configuration Management / Quality Assurance
  - Resource Analysis / Schedule
- Work-in-Progress
  - Available for Review in Early August
  - Version 1.0 Delivered at PDR

United States Naval Observatory

Preliminary Design

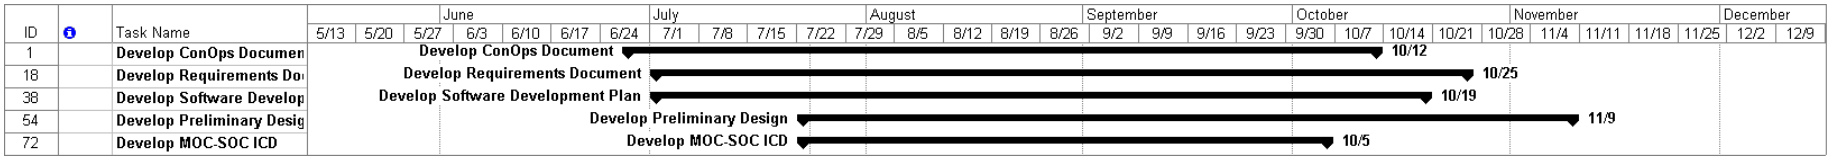


Risk Management

- Cost = Schedule = Technical Risk
- Two Areas of Technical Risk
  - Data Flow
    - Examine Other Large Data Volume Processes
    - Seek Research and Industry Expertise
    - Prototype
  - Algorithm
    - Identify High-Risk Areas
    - Produce Prototypes and Test
    - Develop End-to-End Framework Early On

United States Naval Observatory

PDR Preparation Schedule



- Puts us on track for PDR in Late Nov / Early Dec 01
- Allows ample time for integration with NOFS effort
- Need to assess priority on prototyping
- Need to address process and design issues
- Schedule allows time for comment and buy-in from all play
- PDR success is achieved before, not at, PDR

QL: Anomaly Parameters

- QL trend shall generate running time histories of the following spacecraft and instrument operating parameters:
  - Image centroids vs. window centers
  - Standard deviation
  - Skewness
  - Kurtosis
  - TBD bimodality metric
  - TBD goodness-of-fit metric
  - Total counts per TBD reference stars
  - Total counts per CCD per unit time
  - TBD focus metric
  - TBD charge injection metric
  - Temperature
  - Power
  - Spin rate
  - Spin axis direction
  - Precession rate
  - Precession axis direction
  - Earth—instrument angle
  - TDI rate
  - TDI rate—spin rate difference
  - Observed attitude—model attitude difference
  - Observed profile widths—model profile widths difference
  - Observed counts—model counts difference
